

Church Guidance Note

Risk assessment

(Large church)

What you are required to do

If your church is an employer, you must complete health and safety risk assessments. This is to identify the steps you need to take to comply with relevant law. They must consider the risks to your employees while at work and others who may be affected by it (for example, volunteers, members of the congregation, other visitors, etc.). You may also need to complete more specific assessments under other health and safety regulations. One example of this is where your employees manually lift and carry loads.

If you employ five or more employees, they must be recorded detailing any significant findings and those who may be especially at risk.

It is worth remembering that even if you are not an employer but own or control premises, you may still have to complete risk assessments for certain hazards (for example, asbestos, fire, etc.). These will have to meet specific requirements and, in some cases, you may need specialist assistance with this.

About risk assessments

Completing a risk assessment is not about creating huge amounts of paperwork. It is about identifying sensible precautions for your church.

The level of detail required should be proportionate to the risk. For larger churches, the risk assessments may need to be more comprehensive reflecting the size of your church; the numbers of employees, volunteers or visitors you have; a broader range of hazards; and the nature of the activities involved there. For some hazards (for example, asbestos) you may be required to implement specific precautions. Your assessment should help you identify where this is the case.

Risk Advice Line

Should you have any additional questions on this topic or other risk-related matters, as a valued Ecclesiastical customer you can contact us through our Risk Advice Line on

0345 600 7531

(Monday to Friday 9am – 5pm, excluding bank holidays)

and one of our in-house risk professionals will be able to assist.

Alternatively, you can email us at

risk.advice@ecclesiastical.com

and one of our experts will call you back within 24 hours.

Generally, you can ignore insignificant risks or those associated with life in general. However, where the church activity adds to or significantly alters these, you will need to consider them. You are not expected to anticipate unforeseeable risks.

Finally, solely completing an assessment won't prevent accidents happening. It is important that you take the precautions you identify as being necessary.

How do we get started?

Risk assessments sound complicated; the sort of thing only a trained person could undertake. This is not the case. In fact, for most churches it can be quite straightforward to complete. Put simply, you need to think about what might cause harm to people. You then need to decide if you are taking reasonable precautions.

As with other tasks we are faced with in everyday life, this can seem daunting at first. It is often difficult to know where to start, how best to go about it, or decide when you have done enough. However, following these simple steps while using this template should guide you easily through the process.

Step 1: Identifying the hazards in your church

These are the things that can harm people. Walk around the inside and outside of your church to identify them, deciding how likely it is that harm could occur. Remember to include those hazards that might arise from particular activities, concerts, festivals or other events.

Sometimes, it is much easier if you break this task down into bite-sized pieces, completing one piece at a time. Imagine you are about to decorate your house, you wouldn't think of attempting to do every room in one go. Normally, you would start in one room and gradually work your way through the house until the task is complete. The same is true of completing risk assessments. In some cases, it may be easier to consider separate areas of your church, one at a time. These could include:

- Areas open to the public (for example, the Nave, aisles, porches, balconies, etc.)
- Areas restricted to clergy and volunteers (for example, chancel, vestries, sacristies, serveries, etc.)
- Areas only accessed by a small number of people with specific roles (for example, bell and ringing chambers, organ loft, boiler room, etc.)
- Areas sometimes accessed by the public (for example, towers and tower roofs)
- Outbuildings
- Churchyard and parking areas
- Church hall.

In this template, we have identified some typical hazards that might be present. If they are in your church, you can tick the box where indicated. Remember, this list is not exhaustive and there could be others you may need to consider.

Step 2: Deciding if your precautions are adequate

Having identified the hazards, you should then consider the adequacy of the precautions you have in place. You should also decide if there is more that you need to do. You can then record your findings on the attached template.

For most churches, it will be sufficient to note the main points about the significant risks and what you concluded. Keep your comments simple, but bear in mind that you may want to show that you made a proper check. This would include showing that you dealt with all the obvious significant hazards, taking into account the number of people who could be harmed and that the precautions are reasonable.

Remember that removing the hazard is always the best form of prevention and many things can be put right straightaway.

Here are two examples:

1. You see a mat or rug that could cause someone to trip up. The simplest thing to do is just remove it, making sure that it doesn't reappear.
2. You discover a large quantity of combustible material in a cupboard. Here, disposing of this safely and removing the need for their use in future will be very effective.

In a short space of time, you have identified two hazards and eliminated them.

Sometimes, understanding what health and safety regulations apply to you and referring to guidance will help you decide if you are doing enough. This is particularly so where there is a significant risk of injury – for example, from working at height or using electrical equipment.

To make this easier, we have provided some simple information to help you understand what is required. This can be accessed through our website. You can refer to this to check the adequacy of existing precautions or identify if there is anything else you can do to keep people safe.

Once you have completed your risk assessments, you should implement the precautions you have identified.

Step 3: Document and review your assessments

If you employ five or more people, you must record the significant findings of your assessments and any group of employees who may be especially at risk.

Completing this template will help you document what you have done to protect people that visit your church.

Remember that if you own or control premises, you may have to complete more specific risk assessments for certain hazards (for example, asbestos, fire, etc.). Our guidance will help you identify where this is necessary.

Any assessment you make must be reviewed (and amended if necessary) where you think it is no longer valid or there has been a significant change. Any review you complete should be recorded.

Now complete the following template to prepare a risk assessment for your church.

Our Church Risk Assessment

Name of church:

Address:

Date(s) assessment carried out:

Date review of assessment required:

Signed*:

How we carried out the risk assessment

1. First of all, we looked at information produced by Ecclesiastical Insurance G to help us understand where hazards could occur in our church. This included their Health and Safety Made Simple Guide, the introduction to this template, and the guidance provided on their website at www.ecclesiastical.com/healthandsafety. We also looked at relevant information provided by the Health and Safety Executive at www.hse.gov.uk
2. We discussed if anyone could remember if there had ever been any accidents in the past.
3. We then discussed if any other users of the church or anyone who had done work for the church had reported any concerns regarding health and safety.
4. We then walked around the church, the grounds and any other buildings we are responsible for and noted anything that might cause harm. We considered how accidents might happen and how serious the outcome of those might be. We noted if there were any precautions in place or any additional ones we could take. If it was possible to eliminate the risk entirely, we did this as soon as we could. This was based on what we had learned from the information we had reviewed above (note one).
5. We also considered any hazards presented by other activities, such as festivals, concerts or other events including tower tours and fetes. Where these were to be held, we agreed that we would review health and safety precautions before holding the event.
6. We recorded the findings of our assessment using this template.
7. We communicated the findings to all our employees and volunteers, including anyone new who joins us.
8. We have put the risk assessment into practice, making sure that each identified action is progressed and noting when each one is completed on this template.
9. We will review and update our risk assessments where we suspect they are no longer valid.

*Designated member of the PCC with responsibility for health and safety.
